

1 ABSTRACT OF THE DISCLOSURE

2
3 Structural support apparatus with active or passive heat transfer system with a
4 flexible insulated container, a rigid heat-conductive metallic element, a heat exchange
5 system, where the metallic element structurally supports the container. The metallic
6 element and container form a waterproof bond, and the metallic element and heat
7 exchange system form a thermal bond. A preferred embodiment includes a flexible
8 insulated container forming a closed volume with a plurality of flexible walls.
